operation and maintenance on the final recovery and sort house which required a Level 3 security Email address **Information is available only for registered users.**

clearance to work in the red zone. **Sign in** The general maintenance involved fabricating and replacing steel pipes, chutes, bucket elevator, vibrating screens and feeders.

The last year and a half I have had the privilege to work underground as a Maintenance Boilermaker where my duties are to maintain two Osborn Jaw crushers, two Osborn Grizzly feeders, an Osborn Apron feeder and conveyor belt structure, skirtings, tip structures, discharge chutes, liners and guards. Within my given section my duties also include pipework for pumps, make up pieces and reducers. I have also had the opportunity to work alongside an underground fitter. In doing so I have obtained some experience and knowledge on hydraulics on both rock breakers and apron feeders, alignment of pumps and motors and conveyor belt alignment. On occasions I have been called out to work on the trackless machines which involve repairing drilling booms and repairing wheel loaders.

During my time at Petra Diamonds I was also responsible for coordinating the work by planning the day to day duties. In doing so, I demonstrated that I am able to work without supervision. During this time I was also responsible for developing my skills, knowledge and experience by undertaking training which included a 25 ton mobile crane license, basic rigging and slinging, working on heights, firefighting, safety lifting equipment and first aid.

I have joint the Mine Rescue Service as a Proto Brigadesmen in September 2019
